# Chapter 1

## Class Index

### 1.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">Graphics</a>	.....	<a href="#">3</a>
<a href="#">Turtle</a>	.....	<a href="#">4</a>

## Chapter 2

# Class Documentation

### 2.1 Graphics Class Reference

#### Public Member Functions

- void **setThickness** (int *\_thickness*)
- void **setColor** (tuple< GLfloat, GLfloat, GLfloat, GLfloat > *\_color*)
- void **drawLine** (int *start\_x*, int *start\_y*, int *end\_x*, int *end\_y*)
- pair< int, int > **drawVector** (int *x0*, int *y0*, int *len*, float *angle*)
- void **drawCircle** (int *x0*, int *y0*, int *radius*)

#### 2.1.1 Member Function Documentation

2.1.1.1 void Graphics::drawCircle ( int *x0*, int *y0*, int *radius* ) [inline]

Takes the centre of the circle as *x0*, *y0* values, and the radius of the circle Circle is rendered using the mid-point algorithm

2.1.1.2 void Graphics::drawLine ( int *start\_x*, int *start\_y*, int *end\_x*, int *end\_y* ) [inline]

Draws a line on the viewport given the starting point and ending point Uses Bresenham's line drawing algorithm for rendering Lines can be drawn in all four quadrants using this function Swap start and end point in case starting X pixel is after the ending X pixel

2.1.1.3 pair<int, int> Graphics::drawVector ( int *x0*, int *y0*, int *len*, float *angle* ) [inline]

In many cases, we have to draw a line only given its starting point, length and angle drawVector(..) takes these parameters and calculates the endpoints for such Lines using simple trigonometry Lines are rendered using a call to drawLine(..) Returns an std::pair<int, int> with endpoints of the given line

The documentation for this class was generated from the following file:

- Graphics.h

## 2.2 Turtle Class Reference

### Public Member Functions

- void **changeColor** ()
- void **reduceThickness** ()
- void **translate** (int x\_target, int y\_target)
- void **setAngle** (float angle)
- void **draw** ()
- void **rotate** (float angle)
- void **saveState** ()
- void **restoreState** ()
- void **drawLeaf** ()

The documentation for this class was generated from the following file:

- Turtle.h
